

Problem 42: Is There an Echo In Here?

Difficulty: Easy

Originally Published: Code Quest 2017

Problem Background

An echo is when sound waves bounce off something and come back to you, so you hear yourself saying what you just said. An echo is when sound waves bounce off something and come back to you, so you hear yourself saying what you just said. Wait, did you hear that?

Problem Description

You have been tasked to create an echo program.

Sample Input

The first line of your program's input, received from the standard input channel, will contain a positive integer representing the number of test cases. Each test case will include:

- A single line of text that should be echoed.
