Problem 69: Location Sortation

Difficulty: Easy

Originally Published: Code Quest 2018

Problem Background

David works for a general sales company as a software engineer and has been asked to create a system that stores all the locations where a product is bought. David created this system, however it was impossible to navigate easily as all the locations weren't sorted.

Problem Description

Write a program that sorts all the locations in David's system alphabetically.

Sample Input

The first line of your program's input, received from the standard input channel, will contain a positive integer representing the number of test cases. Each test case will include:

- A country's name (none will be repeated).

```
4
America
England
Poland
Australia
```

Sample Output

Your program should print out the names of each country in alphabetical order.

```
America
Australia
England
Poland
```
